About This Aircraft

N225VG is a very low-timed Latitude, nicely equipped, with stunning cosmetics. It is a two-owner aircraft. The engines are covered on Pratt & Whitney's ESP Gold, the APU is on MSP, and fresh inspections by SkyWay MRO round out this unique value opportunity. This jet was involved in a hangar incident that caused some minor damage, with details below.

Hangar Incident Details:

While hangared in Nebraska, the aircraft was struck by flying debris during a wind event. The outcome were some penetrations of the upper left wing skin, both upper horizontal stabilizer skins and the upper left cowling. Rather than obtaining an engineering order from Textron to patch the holes, SkyWay MRO elected to replace the affected skins with factory new skins. The result: no engineered repairs were necessary, making this a part-off, part-on repair. Pretty minor in the grand scheme of things. Oh, and SkyWay MRO? They are the former Sierra Industries Citation gurus. The best there is. So, you know they did it right. I have a cool time-lapse video you should see here:
