

FOR IMMEDIATE RELEASE

FAA-amended SkyFlush™ Lavatory Modification adds Citation 525 and 525A

Uvalde, TX — April 2026: SkyWay Group, Inc. has received expanded authorization to FAA STC SA04750NY, adding all Cessna Citation 525 and 525A series aircraft to the popular “*SkyFlush™*” modification.

The *SkyFlush™* system replaces the existing flushing-toilet installation with a new lavatory that pumps waste overboard and incorporates a ground-service compatible external service panel. This panel, mounted aft of the wing on the left side of the fuselage, includes an aviation-standard 4” waste drain fitting, blue-water service fitting, LED system-status indicator, and switches for operating the integrated macerator pump and filling the system with water and deodorizer. The modification fits into existing cabinetry with no structural changes required.

Ideal for fleet operators, *SkyFlush™* helps reduce ground service time and maintenance inconvenience, eliminates the need to carry waste tanks through the cabin, and enhances the overall customer experience. The modification delivers tangible improvements in cabin hygiene, serviceability, and passenger comfort.

Multiple Part 135 fleet operators have scheduled installations of *SkyFlush™* for their CJ-series aircraft as part of ongoing fleet maintenance and enhancement programs. SkyWay is now offering this upgrade for immediate installation at their Uvalde, Texas facility.
