Introducing SkyFlush™ — External Lavatory Service Mod for Citation CJ Series business jet aircraft

Keep your cabin fresh and avoid messy lavatory tank changes!

No more carrying a black water tank through the cabin risking spills and offensive odors. SkyWay's new ***SkyFlush™*** modification adds an easy-to-use external service panel to Citation CJ series of aircraft. The original factory OEM toilet insert is replaced with a new flushing toilet designed to pump waste overboard through an industry standard external service panel. The new toilet is precision engineered to fit into the existing toilet cabinet structure, requiring no changes to existing cabinetry or accessories.

The external service panel is installed on the left side of the aircraft, in the aft wing-fuselage fairing. This service panel features an aviation standard 4" waste drain fitting, a blue water service fitting, an integrated macerator pump plus switches and indicator lights for servicing the lavatory tanks. This external service panel is fully compatible with standard aviation industry ground service equipment, making it a breeze to service at any FBO or service facility.
